ABOUT EXPERIMENTAL MUSICAL INSTRUMENTS

Experimental Musical Instruments is an organization devoted to interesting and unusual musical instruments, be they newly invented, little-known traditional, or historic and half-forgotten. We produce books, journals and CDs full of who's-doing-what information that will lead you to fascinating instruments, instrument makers, and music. Our publications also specialize in how-to information for designing

and building instruments of your own, whether odd and exotic or familiar. In addition, we sell hardware for instrument making such as tuning gears, zither pins, fret wire and musical instrument pickups. We have a special focus on home-buildable instruments, since all kinds of people, from first-timers to experts, can enjoy the craft of musical instrument design and construction.
